

Our Fee Guide (All from prices)

Many patients simply compare prices from one surgery to another even though they are not comparing the same level of service and quality of material used in the treatment. If you ask how much does a veneer, a crown, braces, or an implant cost, this would depend on many factors such as:

- The materials used, as well as the quality of the technician's work
- The final result
- The skill and training of the dentist
- The time spent

We will not be the cheapest clinic nor will we be the most expensive, but we do believe that we can offer very good value for the quality of treatment and level of service provided.

View our table below for a list of our fees. Please note that this price list is for guide only and actual treatment costs may vary depending upon individual circumstance.
